Public Television Station Digital Transition Grant Program

This Grant Program provides financing to assist Public Television Stations serving substantial rural populations in implementing the Federal Communications Commission's mandated transition from analog to digital broadcast television transmission. Grant funds may be used to acquire, by purchase or lease, and install facilities and software necessary for the transition. Grant funds may also be used for associated engineering and environmental studies necessary for this purpose. Starting in Fiscal Year 2006, the Grant Program can fund equipment to facilitate local origination and management of programming.

Changes to Note

We have moved all forms, samples and certifications to a "toolkit" -- a separate PDF document. Please obtain this document and use it in conjunction with this application guide to assemble your application. In addition, please review the program regulation (7 CFR 1740). Copies of this guide, the toolkit, the regulation and the announcement of the application window (Notice of Funds Availability) are all available at the Agency Web site (<http://www.usda.gov/rus/telecom/index.htm>).

Scoring is based on a simplified estimate of the coverage area for the transmitters/translators which are included for transition funding in the application. If the application is for a translator, the Rurality and Economic Need scores will be a function of that translator's coverage area, not the coverage area of the transmitter it extends. This is a change for 2006 that is intended to prevent exclusion of rural areas served by translators extending coverage of an urban transmitter.

Rather than using the Longley-Rice tool for estimating coverage, for simplicity of application this year the coverage area is approximated for scoring by use of the *core coverage area*. The core coverage area is the set of counties each of which is at least 75% (by area) within the transmitter's coverage contour area ("Service Contour Map") on file with the FCC and accessible at the FCC Web site at <http://www.fcc.gov/fcc-bin/audio/tvq.html>. The maps at this Web site show coverage contour overlaid on Census Tiger Maps. The core coverage area thus translates the coverage area into whole county data to facilitate scoring via readily-accessible Census information. The applicant decides which counties are 75% within the coverage contour area, subject to review by the Agency. Applicants may explain a decision to include or exclude a county from a core coverage area.

Also, to keep urban areas along the fringes of coverage contour areas from influencing scoring, the core coverage area excludes any urban areas bisected by a boundary on the Service Contour Map. The premise of this is that urban areas will have their own public television stations that serve the needs of the urban area, and the urban area is not the reason the rural station is in operation.

This year, applications may include non-transmitter equipment such as studio equipment and master control equipment. In such a case, for scoring purposes, all of the licensee organization's coverage area(s) that will benefit from the non-transmitter equipment will be used as the basis for scoring since all of the licensee's coverage area will benefit from the grant purchases. This means, for example, that a statewide network seeking studio equipment would be scored based on all of the network's core coverage areas, rather than just the core coverage area where the studio is located.

The Economic Need score is now derived from National School Lunch Program eligibility levels of school districts within the core coverage area, rather than the Per Capita Income. The PCI was found to disadvantage applications from projects serving areas with high cost-of-living. The NSLP is used in the Distance Learning and Telemedicine Grant Program and in the Universal Service "E-Rate" program. NSLP eligibility rates take into consideration the local cost of living for a school district. In this program we use the unweighted average of covered districts to calculate the score.

For Fiscal Year 2006, grants are limited to \$1 million per applicant per year. There is no minimum amount for these grants.

Before You Get Started

Please read the Regulation published in the *Federal Register* on January 20, 2006. A copy is available at the Agency Web site: <http://www.usda.gov/rus/telecom/index.htm>

This Application Guide is intended to provide practical step-by-step help to assist applicants through the process. However, should anything in this guide appear to conflict with the Regulation, the Regulation takes precedence.

General Information

When and Where to Submit Your Application

The application deadline is
May 15, 2006

An original and two copies of a **completed application** must either be hand-delivered to the Agency by this deadline, or carry evidence of having been shipped to the Agency on or before this deadline.

Submit your Application to:

Director, Advanced Services Division
Room 2845-S
Mail Stop 1550
1400 Independence Avenue, SW
Washington, DC 20250-1550

Hand Delivered Applications

Hand-delivered applications will be accepted daily between 8:00 a.m. and 4:30 p.m. (Eastern Standard Time), except Saturdays, Sundays and Federal holidays. Individuals delivering applications must provide proper identification to enter the building.

Shipped Applications

Applications must show proof of shipping by the deadline consisting of one of the following:

1. A legible U.S. Postal Service (USPS) postmark;
2. A legible mail receipt with the date of mailing stamped by the USPS; or
3. A dated shipping label, invoice, or receipt from a commercial carrier.

Applicants should note that the USPS does not uniformly provide a dated postmark. Before relying on this method, an applicant should check with the post office. For applications sent through the USPS, neither of the following is acceptable as proof of mailing:

1. A private metered postmark; or
2. Any other receipt not dated by the USPS.

Electronic Applications

We accept electronic applications submitted by the deadline though we may request original signatures on paper later. Use the Federal government's e-grants Web site (Grants.gov):

www.grants.gov

If you want to submit an application on-line, please obtain all the necessary sign-ups, credentials and authorizations **well in advance of the deadline**. You will need a Central Contractor Registry (CCR) registration before you can submit electronically. In addition, Grants.gov requires some one-time credentialing and online authentication procedures. These procedures may take several business days to complete. Please ensure that your credentials and authorizations are up to date if you went through the process within the last year. Some or all of Grants.gov's requirements require an annual update.

Applicants to other Agency grant programs have experienced difficulty in submitting their applications through Grants.gov, due to unanticipated server downtime. We strongly encourage you to have a back-up plan to ship the required number of copies to us by the deadline, if Grants.gov does not accept your application.

Please follow the instructions at Grants.gov. If you experience a technical problem retrieving or submitting an electronic application, make the Grants.gov customer support resources your first stop (click the "Customer Support" tab on any page of Grants.gov to get started). Agency staffers do not control the technical aspects of Grants.gov and won't be able to help you if you experience a problem. However, we are happy to answer questions about the Program and the contents of an application.

Applications not received or shipped by the deadline will not be considered for funding and will be returned.

Key Definitions

Please refer to the Regulation (7 CFR 1740) for all defined terms.

Core coverage area is the set of counties fully covered, or at least 75% covered, by a digital television transmitter or translator.

Coverage contour area is the area estimated to receive a digital television signal from a transmitter or translator of 41 dBμ for UHF signals, 36 dBμ for channel 7-13 signals, or 28 dBμ for channel 2-6 signals, as shown on the public television station's Service Contour Area filed with the FCC.

Digital television, or DTV, means the digital television system which will replace the current analog system.

Digital transition means the transition from analog television broadcasting to digital television broadcasting. To transition according to FCC rules, a broadcaster must initiate digital television broadcasting while continuing to operate analog television broadcasting until December 31, 2006, to enable viewers the necessary time to acquire digital television reception capability.

Distance learning means any digital public television broadcast to a school, library, home, or other end-user site located in a rural area, for the purpose of providing educational and cultural programming.

Grant Program means this Public Television Station Digital Transition Grant Program.

High definition television, or HDTV, means an enhanced television service which is authorized by the FCC as part of the digital television standard.

Public television station means a noncommercial educational television broadcast station that serves rural areas and is qualified for Community Service Grants by the Corporation for Public Broadcasting under section 396(k) of the Communications Act of 1934.

Rural area means any area of the United States not included within the boundaries of any incorporated or unincorporated city, village, or borough having a population in excess of 20,000 inhabitants.

Rural population means the number of people within the core coverage area of a transmitter who do not live within the boundaries of an incorporated or unincorporated city, village, or borough having a population in excess of 20,000 inhabitants as calculated pursuant to Section 1740.8(c) (1).

Rural Utilities Service, RUS, or the Agency, is the Rural Development Telecommunications Program within the United States Department of Agriculture, which will administer this Grant Program.

Urban area means any area of the United States which is not a *rural area*.

Contacting the Agency

For additional information concerning this grant program, please contact:

Ed Cameron, Director, Advanced Services Division
1400 Independence Avenue SW Stop 1550
Washington, DC 20250-1500

Phone 202-690-4493
Fax 202-720-1051
Email rd-ptv.digital@wdc.usda.gov

Information about the Agency and its programs,
including downloadable documents such as this
application guide and **additional blank forms**, may be
found at

<http://www.usda.gov/rus/telecom>

Applying for a Grant

Applicant Eligibility

To be eligible, the applicant must be a public television station that serves a rural area regardless of whether it also serves any urban area. Only stations required by the Federal Communications Commission to convert from analog to digital broadcasting are eligible.

Grant Amounts

The maximum grant per public television station is \$1 million in any given funding year. There is no minimum grant amount.

Eligible Purposes

Grants may be used to install digital television facilities through purchase or lease (up to 3 years of lease costs may be funded with grant funds); and for associated engineering and environmental studies. All broadcast facilities acquired under this program must be capable of delivering both digital television (DTV, sometimes called standard definition) and high definition television (HDTV) at both the interim and final channel power authorizations. Grant funds may be used to fund facilities directly connected to the digital transition of the broadcast signal such as:

- ◆ Digital transmitters and translators
- ◆ Transmitting antennas
- ◆ New towers or improvements to existing towers necessary for antenna installation
- ◆ Tower ground infrastructure such as land, buildings, fencing, standby power, and where commercial power is unreliable, power generation and conditioning facilities
- ◆ Studio to transmitter/translator communication links
- ◆ Power upgrades of existing DTV transmitters and translators
- ◆ Digital master control equipment to allow local control over digital content and programming
- ◆ Digital production equipment

- ◆ Multicasting and datacasting equipment
- ◆ Associated engineering and environmental studies necessary to implementation
- ◆ Subject to Agency approval, other facilities directly necessary for the digital transition of the broadcast signal.

Ineligible Purposes

Grants shall not be used:

- ◆ To fund operations or for facilities not owned by the applicant (except for certain leased facilities as described in 7 CFR 1740).
- ◆ To expand a station's coverage area into unserved areas where such expansion is not part of the digital transition of an existing transmitter or translator.
- ◆ For ongoing station operational expenses, including but not limited to salaries, wages, and employee benefits. Station employees may engineer and install equipment funded by the grant, and such costs are eligible.
- ◆ Construction performed or expenditures made or obligated prior to the application deadline.
- ◆ For facilities funded under other grants.

Matching Funds

No matching funds are required under this program.

Completing the Grant Application

This section describes all of the information necessary to prepare a complete application:

- | | |
|---|----------------------------------|
| A. Application for Federal Assistance, SF-424 | E. FCC Authorization |
| B. Evidence of Eligibility | F. Compliance with Other |
| C. Project Description | Federal Statutes and Regulations |
| D. Scoring Documentation | G. Environmental Impact and |
| | Historic Preservation |

A. Application for Federal Assistance, SF-424

Complete this form and attach a resolution of the **board of the directors** (or governing body) of the public television station. A copy of Standard Form 424 is provided in the toolkit1.

B. Evidence of Eligibility

The Applicant must provide evidence demonstrating that it meets the definition of a public television station. For the purpose of this Program, a public television station must meet both 1 and either 2a or 2b:

1. Qualifies for Federal funding under Section 396(k) of the Public Broadcasting Act of 1967.
2. And which is **either**:
 - a. Under the rules and regulations of the Federal Communications Commission in effect on November 2, 1978, eligible to be licensed as a noncommercial educational broadcast station and which is owned and operated by a public agency or nonprofit private foundation, corporation, or association; or
 - b. Owned and operated by a municipality and which transmits only noncommercial programs for education purposes

C. Project Description

The applicant shall provide a description of the project including:

- Executive Summary
- Project Cost Spreadsheet
- Project Coverage Maps
- Complete Narrative Description

1. Executive Summary -- This provides a brief description of the entire project and should not exceed two pages.

2. Project Cost Spreadsheet -- This spreadsheet details all the estimated costs associated with the project and the source of the funding (including all other funding such as station funds and other Federal funds) so that the Agency can determine that all costs financed with Program Grant funds are for eligible purposes. The following Sample Budget is a simplified example of a project cost spreadsheet. It is illustrative of one approach, not a required format.

Total Project Cost			
<u>Item</u>	<u>Description</u>	<u>Cost</u>	
Suchet Industries DTV1 Transmitter		\$ 14.50	
Nighy Broadcast Antenna		22.48	
Thaw HD Digital Camera		5.00	
Brett-Hardwicke Digital Editing Console		37.00	
Tower	Materials & Installation	125.70	
Installation of studio equipment		24.50	
Installation of transmitter and antenna	Install Trans.& Antenna	39.87	
Studio to Transmitter Cable & Tower Site Power Feed	Furnish and Install	16.50	
Total Project Cost		\$285.55	

3. Project Core Coverage Area Map(s) -- These maps show the core coverage area(s) which are included in the grant project and how they were determined from the applicant's proposed digital coverage contour area(s). Rurality and Economic Need scores are derived from statistical data for the counties included in the core coverage area for only those transmitters/translators included for funding in the application. The core coverage area is derived from the station's coverage contour area, which is available from the FCC TV Query Web site (<http://www.fcc.gov/fcc-bin/audio/tvq.html>). This map shows coverage at the appropriate field strength in dBμ, overlaid on a Census Tiger Map. The map also shows counties. The core coverage area is the set of counties that are either entirely within the appropriate coverage contour, or are at least 75% (by area) within the contour. For contours where counties are very large with respect to coverage, as might be the case for some western states and for most translators, there may be only one county within the coverage contour. In such cases, this county is the station's core coverage area. Every transmitter and translator must have a core coverage area consisting of one or more counties. If the only coverage contour area

on file is the analog contour, that analog coverage contour area may be used because digital coverage should replicate the analog coverage.

For translators, the coverage contour area may be based on the first available of the following: a computer-generated contour of the proposed digital translator, the coverage of the analog translator, or another mechanism. If the applicant uses another mechanism, it should explain that estimate in the application. The Agency reserves the right to accept or modify an applicant's estimated coverage contour area for a translator.

4. Complete Narrative Description -- This describes the entire digital transition project in detail. Among the details to include are:

- a. A description of facilities and equipment to be purchased and constructed.
- b. A timeline showing the introduction of digital service and the phase-out of analog service.
- c. Any explanations necessary for understanding the cost spreadsheet and maps.

D. Scoring Documentation

All complete applications from eligible applicants that meet the application deadline will be scored in a competitive process to determine which projects are funded. There are three scoring categories. The first is rurality, a measure of the rural character of the applicant's digital television coverage area. Up to 50 points can be earned in this category. The second category is a measure of the economic need of the people in the applicant's coverage area. This category earns up to 25 points. Finally, up to 25 points can be awarded based on critical need.

Three Scoring Categories Totaling 100 Points

- Rurality up to **50** Points
- Economic Need up to **25** Points
- Critical Need up to **25** Points

1. Rurality -- Applicants shall calculate their rurality score and provide supporting documentation for evaluation by the Agency. The supporting documentation shall include maps and worksheets showing the core coverage area and the parts of that area that are considered urban in this program (i.e., with population over 20,000). The applicant shall provide the population of the core coverage area broken into rural and urban totals. For transmitters and translators that cover more than one

county, this is based on simple sums of all included counties' total and urban populations. Also, if any of this information is prepared by or with the assistance of people not directly employed by the applicant (such as a consultant), the applicant shall state the details of this assistance.

The formula for finding the rurality score is:

$$100 \times ((\text{total population} - \text{urban population}) / \text{total population}) - 50$$

Population data is as of the 2000 Census, and may be found at

www.census.gov/main/www/cen2000.html

Urban areas that straddle the boundary of a coverage contour boundary for a transmitter are considered fringe service areas and are excluded from the core coverage area. Urban areas outside the coverage contour area are also excluded, even if the county they are within becomes part of the core coverage area because over 75% of its area is within the coverage contour.

A core coverage area that includes no urban areas will receive a score of 50 points. A core coverage area with a total population of 20,000 or less cannot possibly contain an urban area, so it receives a score of 50 points. Here are some examples of hypothetical computations:

Core Coverage Area Populations		Score
Total Population	Urban Population	
72,000	21,000	20.8
148,000	64,000	6.8
100,000	57,000	0
145,000	22,000	34.8
51,000	No Urban	50
260,000	20,001	42.3

2. Economic Need -- The economic need of the project is found by averaging the National School Lunch Program eligibility percentage rates of all school districts within core coverage area of the project. For purposes of this program, the NSLP percentage reflects the percentage of students **eligible** for reduced-price or free

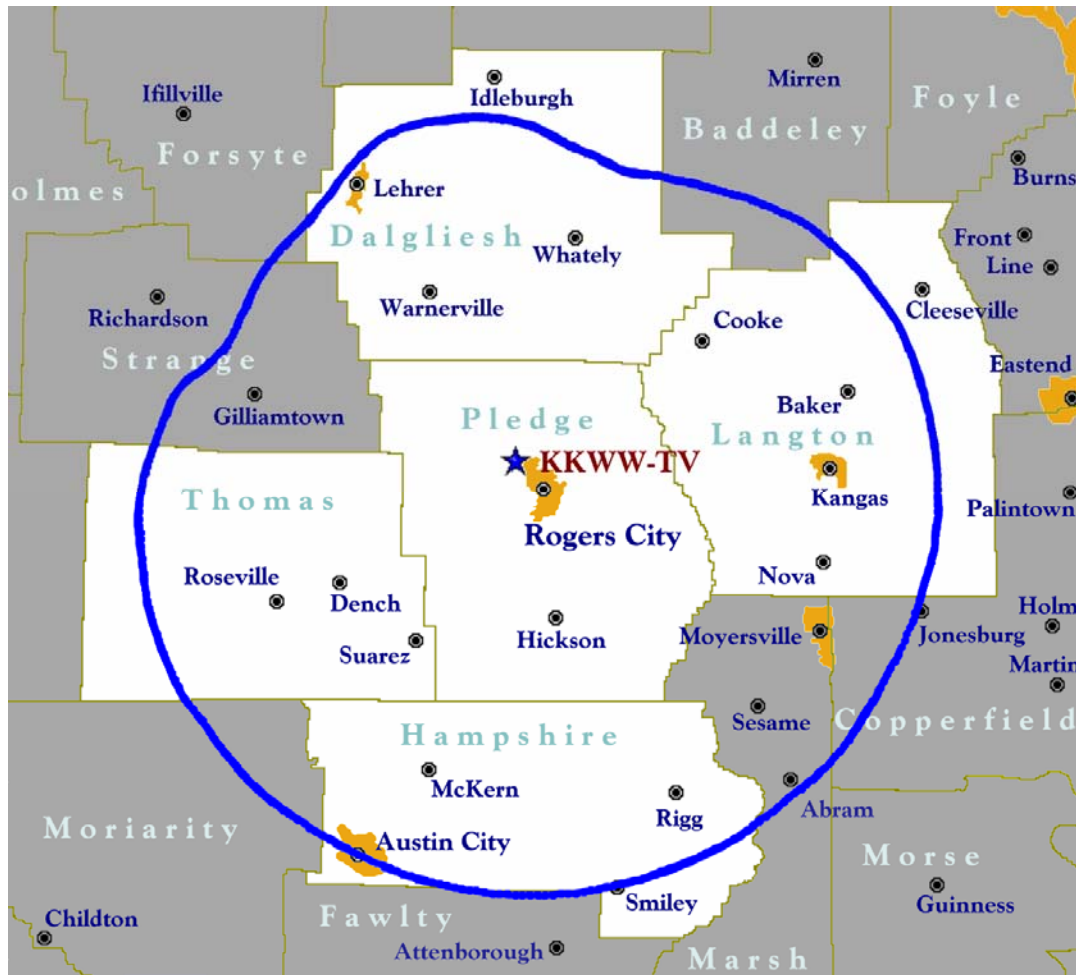

lunches for each area served by an end-user site, **not the percentage of actual participation.**

The NSLP is a Federally-assisted program that provides nutritionally balanced, low-cost or free lunches to millions of children in thousands of schools and childcare institutions. School districts and independent schools in the program receive cash subsidies and donated commodities from USDA for each meal they serve. In return, they must serve lunches that meet Federal requirements and they must offer reduced-price or free lunches to eligible children. The Food and Nutrition Service of USDA administers the program at the Federal level. At the State level, state education agencies and local school districts usually administer the NSLP.

To find the NSLP average, the applicant needs to obtain the NSLP eligibility percentage for every school district that is represented within the counties in the core coverage area. The Economic Need score is the simple average of these scores. Remember, an urban area on the boundary of a coverage contour area is disregarded for rurality scoring purposes, and it is disregarded for economic need scoring as well.

You may obtain the NSLP percentage from the state or local organization that administers the program. That organization must certify the percentage as correct. The application must contain both that certification and contact information for the source.

Transmitter Example

Below is a sample calculation that demonstrates how to calculate the rurality and economic need calculations. Real-world calculations are likely to be more complicated but the concept is unchanged.

Imagine a transmitter covering Rogers City in Pledge County, and surrounding areas. The coverage contour area (<http://www.fcc.gov/fcc-bin/audio/tvq.html>) is shown by the blue line. The service area includes parts of ten counties and contains two areas with population in excess of 20,000. The rural population is the difference between the total population and the urban population in an area.

First, Austin City, since it straddles the coverage contour area boundary, is disregarded from the rurality and economic need computations. Rogers City has a population of 24,000. Five of the ten counties clearly are not 75% covered by the

Rogers City transmitter. The remaining 5 counties are about 75% or more covered by the transmitter and this five county area is defined as the core coverage area.

To find the rurality score, visit the American Factfinder Web site and look up the Factsheets for the five counties. Find also the Factsheet for the urban area, Rogers City.

Pledge County population:	79,000
Langton County population	54,000
Hampshire County population	48,000
Thomas County population	82,000
Dalgliesh County population	56,000

Therefore, the total population of the core coverage area is 319,000.

The total urban population, which can also be called the total of urban populations, is 24,000. There is only one urban town in the core coverage area, Rogers City. There are several towns in the core coverage area that have populations of 20,000 or less. Cumulatively, these towns may have a total population of well over 20,000. But for a town to be considered urban it must have a population of over 20,000.

The rurality score for this project is $100 \times (319,000 - 24,000) / 319,000 - 50 = 42.5$

There are six school districts in the core coverage area. Each county has a county school district, and Rogers City has one. Again, the school district serving Austin City is disregarded because its city limits intersect the coverage contour area boundary and we thus consider it a fringe coverage area. Here are the school district NSLP eligibility scores:

Pledge County NSLP	47%
Langton County NSLP	39%
Hampshire County NSLP	63%
Thomas County NSLP	58%
Dalgliesh County NSLP	42%
Rogers City NSLP	46%

The average NSLP is 49.2%

The economic need score for this project is $(49.2\% \times 100 - 25) / 2 = 12.1$.

Translator Example

Calculating the rurality and economic need scores for a translator is similar to that of a transmitter, once the core coverage area has been defined.

Starting with the service contour map at the TVQuery site (<http://www.fcc.gov/fcc-bin/audio/tvq.html>), determine the counties served by the translator. It is possible that 75% of no county is served by a translator. At least one county must be designated as the translator's core coverage area. Generally, translators cover one or more clusters of population, which may be in more than one county. The core coverage area must include the primary community served by the translator. If the primary community of service is located in two counties, both counties must be

within the core coverage area. If the translator is located between two communities in different counties and was placed so as to cover both, both counties should be represented in the core coverage area.

Let's consider a hypothetical translator located in Duke County that serves the town of McNeil, which is in Buckley County. The translator service contour map shows that the translator serves a very small portion of Duke County. The core coverage area for the McNeil translator is Buckley County. If McNeil spreads more than marginally into Duke County, Duke County would also be included in the core coverage area.

The population of Buckley County is 64,000. McNeil has a population of 2,800. The rurality score for this application is 50.

There are two school districts in the core coverage area, Buckley County School District and the McNeil School District. Their NSLP eligibility percentages are:

Buckley County NSLP	45%
McNeil District NSLP	65%

The economic need score for the McNeil translator is $(55\% * 100 - 25) / 2 = 15$.

3. Critical Need -- Critical need is a measure of the urgency and importance of the project to the rural area the applicant serves. This scoring category is intended to account for factors not covered by other categories and the points are awarded by the Agency based on information supplied by the applicant.

7 CFR 1740 lists six examples of factors that will be considered in determining the critical need score. This list is not intended to limit the forms of critical need presented by applicants. Applicants should also note that the order in which the examples are given has no particular significance – an application demonstrating the existence of the first example of critical need would not necessarily score more points than an application demonstrating the existence of the sixth example.

Examples of critical need presented in the regulation are:

(1) Geographic or coverage characteristics of the public television station's digital television coverage area that makes the digital transition unusually expensive. This could occur when a station covers areas separated by areas of uninhabitable land (or water) that forces multiple transmitters or translators for reasonable population coverage;

- (2) A severe lack of specialized human resources (such as teachers) for which digital educational television will compensate. An example of this would be communities so small that they cannot sustain reasonably-staffed schools;
- (3) Geographic isolation of communities which will be overcome with public television station services. This situation could occur in a remote mountainous area where public television might be the only terrestrial television service;
- (4) Non-traditional community needs (such as adult vocational retraining) that may be met only with digital public television station broadcast capabilities. A community that has recently lost its industrial base and where perhaps a language barrier prevents a large segment from obtaining job training;
- (5) Historical events that have placed the public television station in severe financial stress. A station that has recently replaced its tower due to a severe weather event would be an example of this critical need; and
- (6) The degree to which the project purposes will specifically benefit the rural public. Some types of projects, such as transmitter power upgrades, will specifically benefit rural residents, and might not at all benefit urban residents, in a core coverage area to a degree not captured by the area's rurality score.

E. Federal Communications Commission Authorization

The applicant shall provide evidence that the Federal Communications Commission has authorized the initiation of digital broadcasting at each of the applicant's transmitter and translator sites. In the event that a Federal Communications Commission construction permit has not been issued for one or more sites, the Agency may include those sites in the grant, and make advance of funds for that site conditional upon the submission of a construction permit.

F. Compliance with other Federal Statutes and Regulations

The applicant is required to submit evidence that it is in compliance with other Federal statutes and regulations as follows:

- 1. E.O. 11246, Equal Employment Opportunity, as amended by E.O. 11375 and as supplemented by regulations contained in 41 CFR part 60.

2. Architectural barriers.
3. Flood hazard area precautions.
4. Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970.
5. Drug-Free Workplace Act of 1998 (41 U.S.C. 701).
6. E.O.s 12549 and 12689, Debarment and Suspension; (See 7 CFR 3017.510).
7. Byrd Anti-Lobbying Amendment (31 U.S.C. 1352). If the applicant is engaged in lobbying activities, the applicant must submit a completed disclosure form, “Disclosure of Lobbying Activities” (See 7 CFR Part 3018).
8. Federal Obligations Certification on Delinquent Debt.
9. Compliance with 41 USC §§ 10a-10d, “Buy American” procurement provisions.

G Environmental Impact and Historic Preservation

The applicant must provide details of the digital transition's impact on the environment and historic preservation, and comply with 7 CFR 1794, which contains the Agency's policies and procedures for implementing a variety of federal statutes, regulations, and executive orders generally pertaining to the protection of the quality of the human environment.

The application shall contain a separate section entitled "Environmental Impact of the Digital Transition." This shall include the Environmental Questionnaire & Certification (see the toolkit), on which the applicant describes the impact of its digital transition. Submission of the Environmental Questionnaire & Certification does not constitute compliance with 7 CFR 1794.

For a digital transition project that only involves internal modifications or equipment additions to buildings or other structures, the environmental information normally required includes a description of the internal modifications or equipment additions, the size of the site in hectares, and the general nature of the proposed use of the facilities once the project is completed, including any hazardous materials to be used, created or discharged, any substantial amount of air emissions, wastewater discharge, or solid waste that will be generated.

Putting It All Together

The grant application should be **assembled** and **tabbed** in the following order: Numbered attachments have been provided in the toolkit for your use. Remember that additional blank forms are available at the Agency Web site (<http://www.usda.gov/rus/telecom>). Please use only the applicable attachments listed below.

Item No.	Description	Toolkit Number
1	Completed <i>Application for Federal Assistance</i> , Std. Form 424	1
2	Summary Worksheet	2
3	Evidence of Eligibility	
4	Executive Summary	
5	Project Cost Spreadsheet	
6	Broadcast Coverage Maps	
7	Complete Narrative Description	
8	Applicant's estimated Rurality Scoring	
9	Applicant's estimated Per capita Scoring	
10	Critical Need Information	
11	Federal Communications Commission Authorization	
12	E.O. 11246, Equal Employment Opportunity, as amended by E.O. 11375 and as supplemented by regulations contained in 41 CFR part 60	3
13	Certificate Regarding Architectural Barriers	4
14	Certificate Regarding Flood Hazard Area Precautions	5
15	Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 Certification	6
16	Certification Regarding Drug-Free Workplace Requirements	7
17	E.O.s 12549 and 12689, Debarment and Suspension; (See 7 CFR 3017.510)	8
18	Byrd Anti-Lobbying Amendment (31 U.S.C. 1352). If the applicant is engaged in lobbying activities, the applicant must submit a completed disclosure form, "Disclosure of Lobbying Activities" (See 7 CFR Part 3018)	9
19	Federal Obligations Certification on Delinquent Debt	10
20	Environmental Impact and Historic Preservation	11
21	Buy American Certification	12
22	Supplemental Information (If Any)	

According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is 0572-0134. The time required to complete this information collection is estimated to average 23 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

The United States Department of Agriculture prohibits discrimination in its programs on the basis of race, color, National origin, sex, religion, age, disability, political beliefs, and marital or family status. (Not all bases apply to all programs.)

Persons with disabilities who require alternative means for communications of program information (Braille, large print, audiotope, etc.) should contact USDA's TARGET Center on (202) 720-1127 (TDD).

USDA is an equal opportunity employer.
